

## Atos Origin and InfoGin deploy mobile internet services at Telefónica de España Mobile Business

October 7 2008 | European Communications

Atos Origin, an international IT services company and InfoGin, a specialist in web-to-mobile content and functionality adaptation solutions, have implemented a web-to-mobile content adaptation solution for Telefónica de España Mobile Business, the largest wireless operator in Spain.

As the prime contractor, Atos Origin was in charge of providing complete project management services and responsible for overall integration of InfoGin's Intelligent Mobile Platform.

"We are very happy with the outcome of this collaboration, it has enabled us to provide end-to-end services to Telefónica's end users and guarantee the highest quality of service requirements," said Miguel Bravo, Telefonica Executive Key Account Manager, Atos Origin.

"The partnership builds on Atos Origin's long track record of successful deployment and management of enhanced critical revenue services at Telefónica."

"We are delighted that Telefónica has joined the list of global tier-1 operators in Europe, through its strategic move to provide mobile users with the best real Internet experience," said Eran Wyler, CEO & Founder of InfoGin. "This will inevitably drive a significant increase in user uptake of these new services over the coming years."
